Qian Qian

me@qubik.top | Qubik65536 | in/qianq | qubik65536.top

Skills

- **Languages**: Java, Python, Shell, C, C++, Kotlin, Rust, Swift, Typst, LaTeX
- **Tech/Tools**: Git, GitHub Actions, Linux, Unit Testing, JUnit, PyTest, NGINX, Docker, Ktor, Flask, SwiftUI, Quilt

Experience

Software Developer & Software Development Co-Lead September 2025 — Present
Waterloo Rocketry *Waterloo, Ontario, Canada*

- Built Mission Control deployment infrastructure to ensure consistent and reproducible software environments using Docker containerization and Ansible configuration management.
- Developed Python-based data acquisition and processing systems to improve reliability of Mission Control telemetry workflows, supported by PyTest unit testing.
- Assembled and tested ground-side electrical and sensor systems to support reliable launch-pad operations during integration and pre-launch testing.
- Mentor developers to improve team-wide engineering practices through development standards, Git workflows, unit testing, pull-request reviews, and collaborative debugging.

Software Engineering Intern, Build and Automation May 2026 — August 2026
Maxon *Montreal, Quebec, Canada*

- Built a Redshift rendering performance-monitoring system to identify regressions across standard rendering unit tests using Python, Grafana, and Loki for data processing, aggregation, and visualization.
- Automated ArchVis changelog generation and build notifications to improve QA visibility using Python and GitLab and Jira APIs.

Projects

QubeC - *Rust, C++* August 2025 — Present

- Implemented a bytecode compiler and virtual machine for a C-like programming language.

Typstify - *Swift, SwiftUI, Rust* July 2024 — Present

- Developed a native Typst editor for iPadOS to enable professional document creation on iPads by leveraging SwiftUI with Rust backend integrated via swift-bridge, a library facilitating interoperability between Swift and Rust.
- Contributed to 3 upstream dependencies to strengthen both the app and the broader open-source ecosystem by submitting code patches and bug reports.

Maintainer, ungoogled-chromium-macos November 2023 — Present

- Delivered 100+ releases to 5000+ users to provide a privacy-focused browsing experience on macOS by tracking upstream updates and maintaining build scripts and patches.
- Reduced the CI build time by 40% to accelerate release cycles by optimizing GitHub Actions workflows.

CalcLox - *Java* January 2025 — May 2025

- Designed and implemented the interpreter of a custom scripting language based on Lox for a programmable calculator.
- Implemented unit testing using JUnit to ensure the correctness of the interpreter.

Education

University of Waterloo Waterloo, Ontario, Canada
Candidate for Bachelor of Software Engineering, Honours Software Engineering, Co-op *September 2025 — May 2030*

Additional Information

- **Honour and Awards**: Winner of Hack the North 2025 QNX Software Challenge, Canadian Senior Mathematics Contest Distinction (2024), 2 x Canadian Computing Competition Distinction (2023, 2024)
- **Activities**: Programming Competition Problem Setter at CRC Robotics
